## Conditional Probability

A random survey was taken to gather information about grade level and car ownership status of students at a school. This table shows the results of the survey. Write your answer as a reduced fraction.

Car Ownership by Grade

|  | Owns a Car | Does Not Own a Car | TOTAL |
| :--- | :---: | :---: | :---: |
| Junior | 6 | 10 | 16 |
| Senior | 12 | 8 | 20 |
| TOTAL | 18 | 18 | 36 |

1. Find the probability that a randomly selected student will be a junior, given that the student owns a car.
2. Find the probability that a randomly selected student will own a car, given that the student is a senior.

The table below shows numbers of registered voters by age in the United States in 2004 based on the census. Find each probability in decimal form, 2 places.

| Age | Registered Voters <br> (in thousands) | Not Registered to Vote <br> (in thousands) |  |
| :---: | :---: | :---: | :---: |
| $18-24$ | 14,334 | 13,474 |  |
| $25-44$ | 49,371 | 32,763 |  |
| $45-64$ | 51,659 | 19,355 |  |
| 65 and over | 26,706 | 8,033 |  |
|  |  |  |  |

3. Find the probability that a randomly selected person is registered to vote, given that the person is between the ages of 18 and 24 .
4. Find the probability that a randomly selected person is not registered to vote, given that they are 65 and over.
5. Find the probability that a randomly selected person is between the ages of 45 and 64 and is not registered to vote.

A faculty advisor at Ridge High School surveyed 100 students about their preference for a social event. Of the 100 students surveyed, 50 were tenth graders and 50 were eleventh graders. Of the tenth graders, 30 chose a bowling party and 20 chose a dance. Of the eleventh graders, 20 chose a bowling party and 30 chose a dance.
6. Make a two way frequency table to represent the data.

|  | Bowling <br> (B) | Dance (D) |  |
| :---: | :---: | :---: | :--- |
| $10^{\text {th }}$ graders (T) |  |  |  |
| $11^{\text {th }}$ graders (E) |  |  |  |
|  |  |  |  |

7. Find $P(B)$. Write your answer as a reduced fraction.
8. Find $P(B \mid T)$. Write your answer as a reduced fraction.
9. Based on your answers on \#7 \& 8, do you think that the probability of liking bowling is dependent (different answers) on whether a student is in the $10^{\text {th }}$ or $11^{\text {th }}$ grade?

After growing tired of squinting while driving, Dwayne went shopping for a pair of sunglasses. He tried on glasses with different frames and lenses. He tried on 15 pairs of glasses, 8 that were cat eye frames and 7 that were browline frames. 2 of the cat eye frames were polarized lenses. He also tried on 10 regular lenses.
10. Make a two-way frequency table to represent the data.

|  | Polarized <br> (P) | Regular <br> (R) |  |
| :---: | :---: | :---: | :---: |
| Cat Eye (C) |  |  |  |
| Browline (B) |  |  |  |
|  |  |  |  |

11. What is the probability that a randomly selected pair of sunglasses has regular lenses, given that the pair of sunglasses has cat eye frames?
